(SECTION 2)

SEMESTER II SESSION 2019/2020

ASSIGNMENT II

(INDIVIDUAL ASSIGNMENT)

LECTURER: MADAM SITI HASNAH TANALOL

NAME: TAN XUAN NI

MATRIC NUMBER: BI 19110270

CONTENTS

NO.	TOPIC	PAGE
1.0	Introduction	1-2
2.0	Scope/ Proposed Works	3
3.0	Scope/ Proposed Works (Diagram)	4
4.0	Java Code (i) InformationChooseForm.java (ii) MyDoctorForm.java (iii) MyNurseForm.java	5 5-7 7-19 19-31
5.0	Object Oriented Concept Implementation	32-33
6.0	Read and Write Implementation	34-35
7.0	User Manual (How to use the system)	36-40
8.0	Conclusion	41

1.0 Introduction

In 2020, the coronavirus Covid-19 had spread over 200 countries around the world. Covid-19 is a type of virus which is an infectious disease caused by a newly discovered strain of coronavirus. This disease will cause respiratory infections in humans. In our country, the first case of Covid-19 was detected on 24 January 2020 and until now there are over 8000 cases. The increase in cases of Covid-19 patients causes the lack of health and medical support teams. Therefore, Ministry of Health (MoH) had asked for the volunteers who are more anesthesiologists and nurses with specialized experience in intensive care to help the patients. The volunteer who had worked in health care before and they wish to be a volunteer need to fill up the registration form.

The admin and participants will face some problems if they are still using the traditional registration which is paper based. The problems will be faced by the volunteers are that they will easily get a close contact with other people and some of them will not follow the social distancing rules while making a registration at the counter. This will cause the volunteers to be easily get into risk and affected by the Covid-19. They also will waste time standing in the long queues at the counter. Then, they also feel very rushed because they need to take out their free time and make the registration in the business hour due to the fact that they might need to work at that time. Other than that, the admin will also need to spend a lot of time to collect and key in the data of the volunteers. So, the Online Covid-19 2020 Volunteer Registration System is produced.

The main purpose of the Online Covid-19 2020 Volunteer Registration System is to provide volunteers an easier way to make a registration and help admin collect the volunteer's data systematically. This system also helps to reduce the risk of getting the disease of Covid-19 since the volunteers make the registration online. The volunteers can register online through any Internet-enabled application such as computer and smartphone. The volunteers will done the registration in a few minutes without filling up the paper form and line up to pass up the registration form at the counter. Besides that, this system allows volunteers to choose their field and the state of hospital they would like to join.

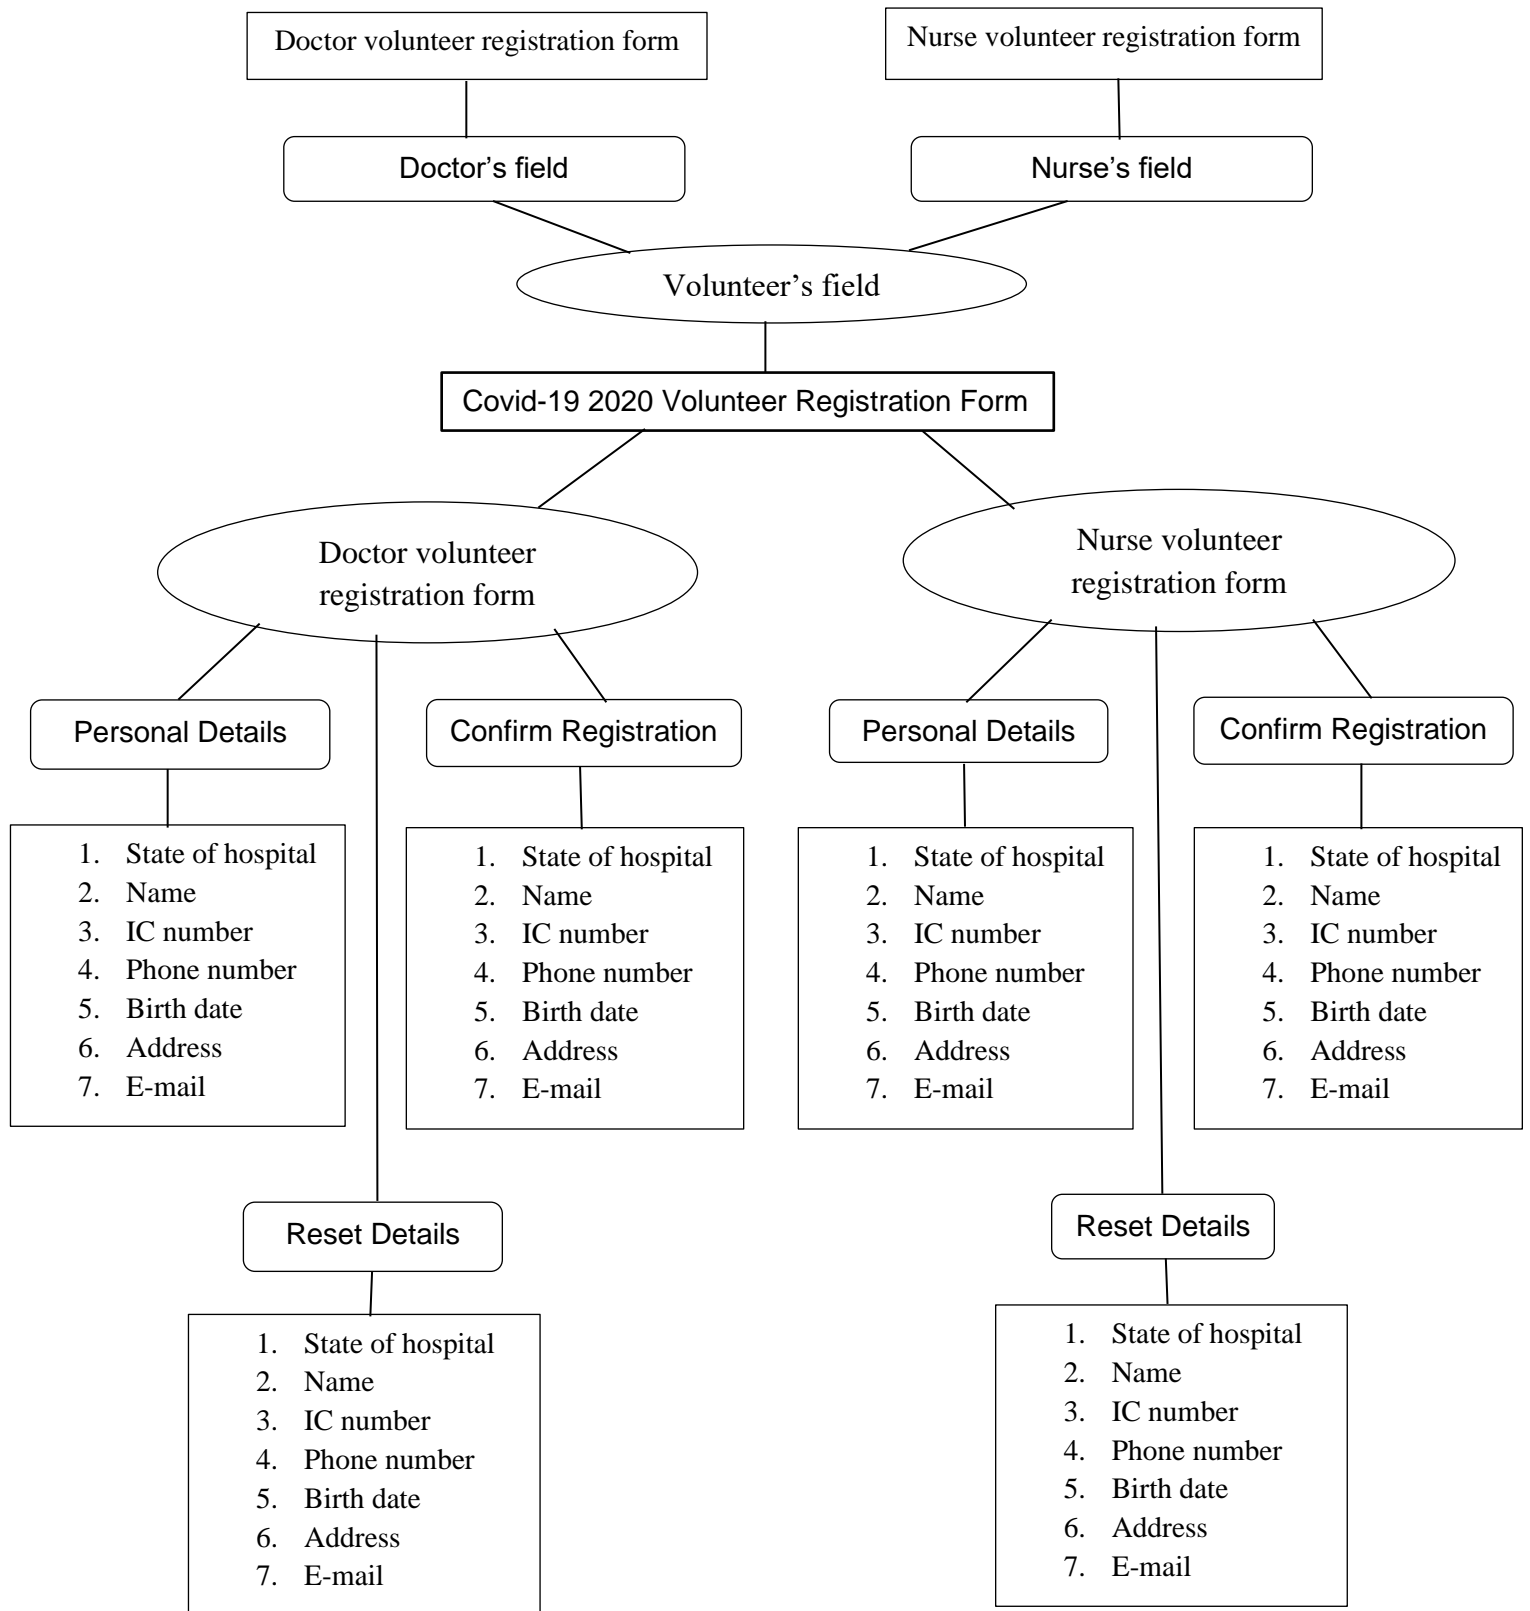

The objectives of this system are:

1. Learn to produce an online registration system.
2. To gain knowledge about programming.
3. To reduce the workload and manpower.
4. To provide an online registration form which is always available for the volunteers to take registration.
5. To make it easier and faster for admin and volunteer to manage and make a registration.
6. To obtain the data of the person who is making a registration.
7. To reduce the risk of getting the disease.

2.0 Scope/ Proposed Works

1. Volunteer's field
 - a. Doctor's field
 - Doctor volunteer registration form
 - b. Nurse's field
 - Nurse volunteer registration form
2. Doctor volunteer registration form
 - a. Personal Details
 - State of hospital, name, IC number, phone number, birth date, address, e-mail
 - b. Confirm Registration
 - State of hospital, name, IC number, phone number, birth date, address, e-mail
 - c. Reset Details
 - State of hospital, name, IC number, phone number, birth date, address, e-mail
3. Nurse volunteer registration form
 - a. Personal Details
 - State of hospital, name, IC number, phone number, birth date, address, e-mail
 - b. Confirm Registration
 - State of hospital, name, IC number, phone number, birth date, address, e-mail
 - c. Reset Details
 - State of hospital, name, IC number, phone number, birth date, address, e-mail

3.0 Scope/ Proposed Works

4.0 Java Code

(i) Volunteer's field class file (InformationChooseForm.java)

```
// OOP Java Individual Assignment 2 (BI 1911270 TAN XUAN NI)
// COVID-19 2020 Volunteer Registration Form

//Let the user choose and click on the button that the field of
volunteer they want to join

// Import statements
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;
import java.io.*;

// Begin the InformationChooseForm class
class InformationChooseForm extends JFrame
{
    // Create component classes
    private JLabel label, label1;
    private JPanel panel;
    private JButton doctor, nurse;
    private ImageIcon icon, icon1;

    // Begin the InformationChooseForm constructor
    public InformationChooseForm()
    {
        // Create a new JFrame Container
        // Specify the size and the location of the frame
        // Let the frame resizable
        JFrame frame = new JFrame("COVID-19 VOLUNTEER
Registration(Choose Field)");
        frame.setBounds(550, 250, 500, 300);
        frame.setResizable(true);

        // Terminate the program when the user closes the application
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

        // Create a new JPanel
        // Set the layout of the panel
        // Add it to the frame
        panel = new JPanel();
        panel.setLayout(null);
        frame.add(panel);

        // Create a new label
        // Set the font, size, and location of label
        // Add it to the panel
```

```

        label = new JLabel("COVID-19 2020 VOLUNTEER ONLINE
REGISTRATION");
        label.setFont(new Font("Arial", Font.BOLD, 15));
        label.setSize(500, 20);
        label.setLocation(50, 50);
        panel.add(label);

        // Create a label1
        // Set the font, size, and location of label1
        // Add it to the panel
        label1 = new JLabel("Please choose the field of volunteer you
want to be.\n Thank You !");
        label1.setFont(new Font("Arial", Font.BOLD, 13));
        label1.setSize(500, 20);
        label1.setLocation(40, 80);

+ " " +
(String)year.getSelectedItemAt());
            writer.write(System.getProperty("line.separator"));

            writer.write(address.getText() + ": \t" +
myaddress.getText() + ", \n\t" +
myaddress1.getText()

```

```

                                + ", \n\t"                                " +
myaddress2.getText());
        writer.write(System.getProperty("line.separator"));

        writer.write(email.getText() + ": \t" +
myemail.getText());
        writer.write(System.getProperty("line.separator"));

        writer.close();

        // Create an icon and a dialog that show a message
        JOptionPane.showMessageDialog(null, "File Written Had
Stored", "Message", JOptionPane.INFORMATION_MESSAGE, icon6);
    }
    catch (Exception ae)
    { JOptionPane.showMessageDialog(null, "Error");
    }
}
else
    // The dialog message will pop up to remind the user select
the check box
    {
        mybox.setText("");

        JOptionPane.showMessageDialog(null, "Please accept the
terms & conditions.", "Message", JOptionPane.INFORMATION_MESSAGE,
icon7);
    }
}

// If the user press RESET button, all the information will be
clear
else if (e.getSource() == reset)
{
    String def = "";
    choosenstate.setSelectedIndex(0);
    myname.setText(def);
    myic.setText(def);
    myphone.setText(def);
    day.setSelectedIndex(0);
    month.setSelectedIndex(0);
    year.setSelectedIndex(0);
    myaddress.setText(def);
    myaddress1.setText(def);
    myaddress2.setText(def);
    myemail.setText(def);

    mybox.setText(def);
    term.setSelected(false);

```

```
        }

    }
}

// Driver Code
class RegistrationNurse
{

    public static void main(String[] args) throws Exception
    {
        MyNurseForm thisSecform = new MyNurseForm();
    }
}
```

5.0 Object Oriented Concept Implementation

(i) Inheritance:

The InformationChooseForm class had incorporate the JFrame class. This is done by using the extends keyword.

```
// Begin the InformationChooseForm class
class InformationChooseForm extends JFrame
{
```

MyDoctorForm class inherits JFrame class.

```
// Begin the MyDoctorForm class
class MyDoctorForm extends JFrame implements ActionListener {
```

MyDoctorForm class inherits JFrame class.

```
// Begin the MyDoctorForm class
class MyNurseForm extends JFrame implements ActionListener {
```

(i) **Object and Classes:** A class called JFrame and an object called frame is created.

```
JFrame frame = new JFrame("Covid-19 2020 Volunteer Registration Form");
frame.setBounds(280, 100, 1000, 650);
frame.setResizable(true);
```

(ii) **Interface:** The JFrame class had implements the Action Listener interface.

```
// Begin the MyDoctorForm class
class MyDoctorForm extends JFrame implements ActionListener {
```

(iii) **Inner Class:** Anonymous inner class is a class that have no name and it had used for implements the Action Listener interface.

```
nurse = new JButton("Nurse", icon1);
nurse.setSize(150, 50);
nurse.setLocation(260, 130);
nurse.addActionListener(new ActionListener() //Anonymous Inner class
{ public void actionPerformed(ActionEvent e)
{
    // After press the Nurse button, it will move to MyNurseForm class
    new MyNurseForm();
}
});
```

(iv) **Exception Handling:** Try and catch block had used for handle the exception.

```
// Create a text file for enable to read the input from external storage file  
// and write the output to external file_  
try  
{ writer = new FileWriter("Covid-19 Volunteer-Doctor.txt", true);  
  writer.write("Covid-19 2020 Volunteer Registration Form Personal Detail(Doctor)");  
  writer.write(System.getProperty("line.separator"));  
  writer.write(System.getProperty("line.separator"));  
}
```

•
•
•

```
}  
catch(Exception ae)  
{ JOptionPane.showMessageDialog(null, "Error");  
}
```

6.0 Read and Write Implementation

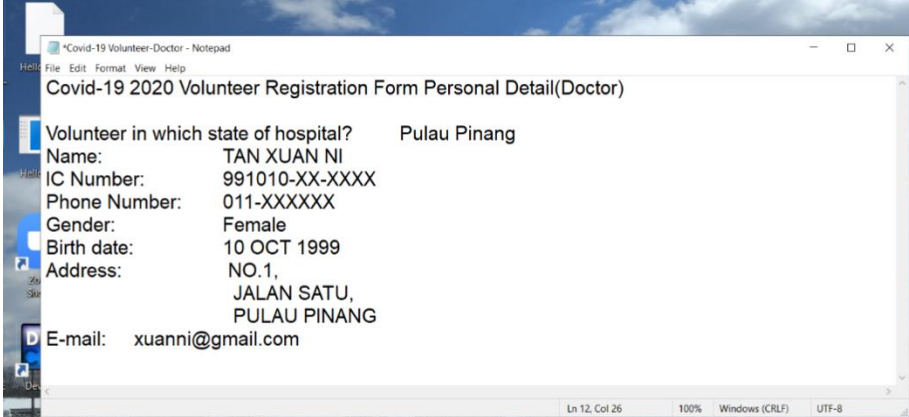

The user able to write the output to external file (.txt) and read the input from external storage file (.txt).

The two figures below show the personal details had written in MyDoctorForm class file and MyNurseForm class file.

The screenshot shows a web application window titled "Covid-19 2020 Volunteer Registration Form (Doctor)". The form includes a header with a logo and the title. Below the header, there are several input fields for personal details, each preceded by a green checkmark icon. The fields are: "Volunteer in which state of hospital?" (a dropdown menu with "Pulau Pinang" selected), "Name" (text input "TAN XUAN NI"), "IC Number" (text input "991010-XX-XXXX"), "Phone Number" (text input "011-XXXXXXX"), "Gender" (radio buttons for "Male" and "Female", with "Female" selected), "Birth date" (three dropdown menus for "10", "OCT", and "1999"), "Address" (three stacked text inputs: "NO.1", "JALAN SATU", and "PULAU PINANG"), and "E-mail" (text input "xuanni@gmail.com"). Below these fields is a checkbox labeled "Please Agree to the Terms And Conditions." which is checked. At the bottom are two buttons: "REGISTER" and "RESET". To the right of the form, there is a pink rectangular area and a text prompt: "Please check your personal details. Please press RESET button, if your details is wrong."

The screenshot shows a web application window titled "Covid-19 2020 Volunteer Registration Form (Nurse)". The form layout is identical to the one above, but the title and the gender selection are different. The title is "Covid-19 2020 Volunteer Registration Form (Nurse)". The gender selection has "Male" selected instead of "Female". The rest of the form fields and the "REGISTER" and "RESET" buttons are the same. To the right of the form, there is a yellow rectangular area and the same text prompt: "Please check your personal details. Please press RESET button, if your details is wrong."

The two figures below show the personal details had stored into text file (.txt) from MyDoctorForm class file and MyNurseForm class file.

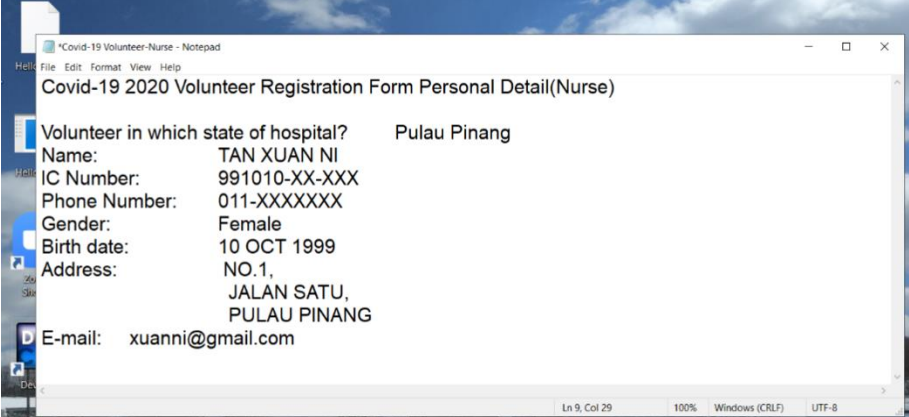

The screenshot shows a Notepad window with the title bar '*Covid-19 Volunteer-Doctor - Notepad'. The text inside the window is as follows:

```
Covid-19 2020 Volunteer Registration Form Personal Detail(Doctor)

Volunteer in which state of hospital?   Pulau Pinang
Name:      TAN XUAN NI
IC Number: 991010-XX-XXXX
Phone Number: 011-XXXXXX
Gender:     Female
Birth date: 10 OCT 1999
Address:    NO.1,
            JALAN SATU,
            PULAU PINANG
E-mail:     xuanni@gmail.com
```

The status bar at the bottom indicates 'Ln 12, Col 26', '100%', 'Windows (CRLF)', and 'UTF-8'.

The screenshot shows a Notepad window with the title bar '*Covid-19 Volunteer-Nurse - Notepad'. The text inside the window is as follows:

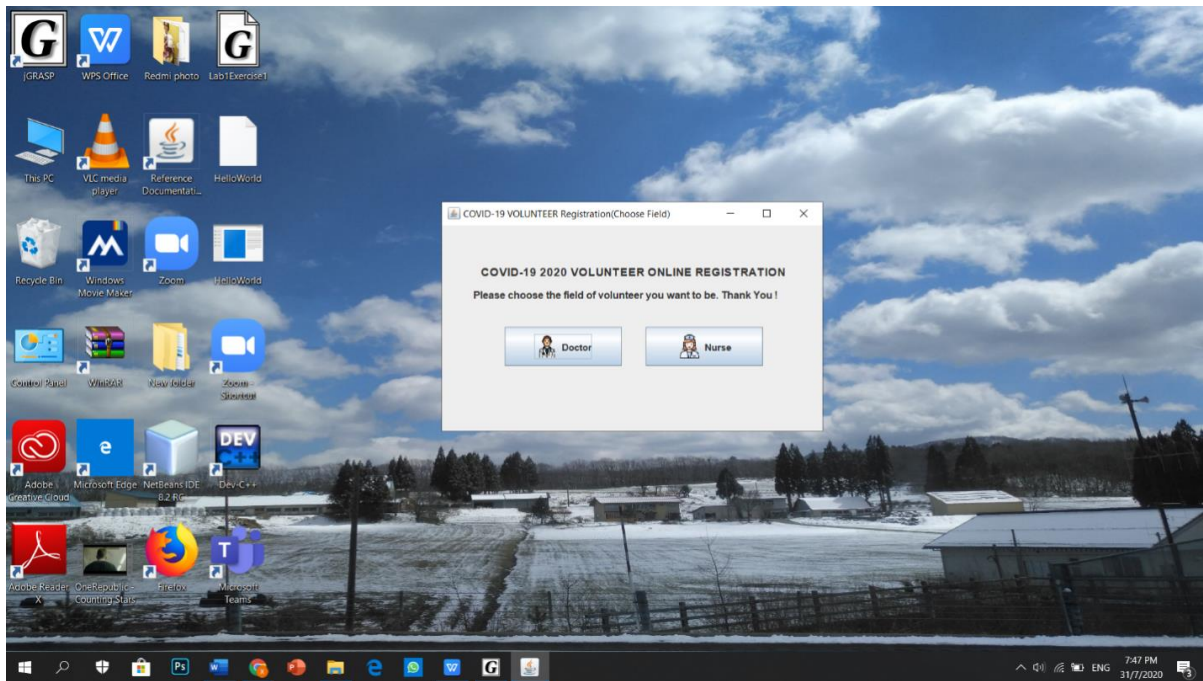

```
Covid-19 2020 Volunteer Registration Form Personal Detail(Nurse)

Volunteer in which state of hospital?   Pulau Pinang
Name:      TAN XUAN NI
IC Number: 991010-XX-XXX
Phone Number: 011-XXXXXXX
Gender:     Female
Birth date: 10 OCT 1999
Address:    NO.1,
            JALAN SATU,
            PULAU PINANG
E-mail:     xuanni@gmail.com
```

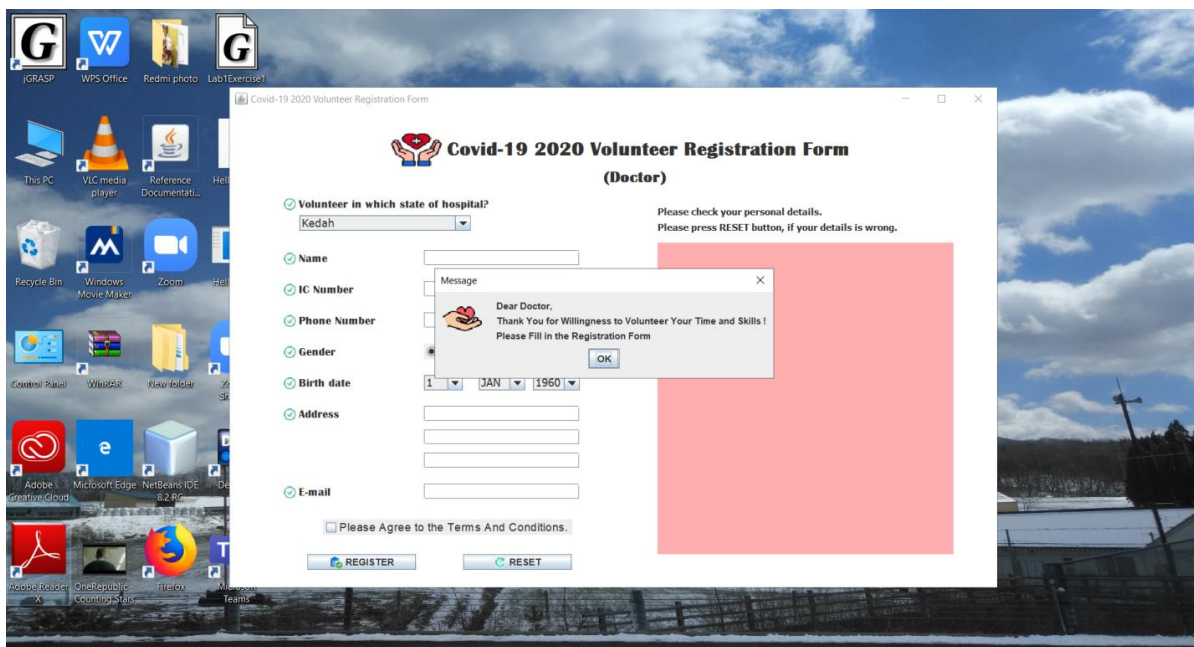

The status bar at the bottom indicates 'Ln 9, Col 29', '100%', 'Windows (CRLF)', and 'UTF-8'.

7.0 User Manual (How to use the system)

Step 1: Run the program. Press on the button that the field of volunteer (doctor or nurse) wanted to join by the user.

Step 2: If the user press “Doctor” button, it will switch to Doctor volunteer registration form.

Conclusion

In conclusion, this online volunteer registration system has brought a lot of advantages to the admin and the volunteers because it can avoid the close contact with other people and reduce the transmission of coronavirus. It not only makes the management become easier and faster but it also saves a lot of money. The volunteer no need to worry about needing to make the registration at the counter within business hours because they can make their registration at any time and instantly. This system also helps to reduce the workload and time on admin. The admin can straight collect the information of the volunteers through this system and eliminates a lot of paperwork.

After finishing this assignment, I learned that we need to learn a lot of programming knowledge in Java to produce a GUI program. Then, I need to use those knowledge correctly to make sure the program can run smoothly.
